## ANNEXURE II

### Soil test based fertilizer recommendations for Sunflower and Castor crops for Narkhoda farm soils (Alfisols) for 2021

STCR Equation for Sunflower Alfisols - Target 15q/ha	STCR Equation for Castor Alfisols - Target 20q/ha
$F\ N = 11.44 \times T - 0.41 \times \text{Soil}\ N$	$F\ N = 8.35 \times T - 0.40 \text{ SN}$
$F\ P_2O_5 = 7.49 \times T - 2.10 \times \text{Soil}\ P$	$F\ P_2O_5 = 7.17 \times T - 2.88 \text{ SP}$
$F\ K_2O = 3.80 \times T - 0.10 \times \text{Soil}\ K$	$F\ K_2O = 3.02 \times T - 0.10 \text{ SK}$
Where, FN = Fertilizer N required/ha; T = Target yield in q/ha; Soil N = Value of Soil N kg/ha F P2O5 = Fertilizer P required/ha; T = Target yield in q/ha; Soil P = Value of soil P kg/ha F K2O = Fertilizer K required/ha; T = Target yield in q/ha; Soil K = Value of soil K kg/ha	

Plot-wise fertilizer requirement as per the STCR recommendation for the target yield

STCR Equation for <u>Sunflower Alfisols - Target 15q/ha</u>	STCR Equation for <u>Castor Alfisols - Target 15q/ha</u>
$F N = 11.44 \times T - 0.41 \times S N$	$F N = 8.35 \times T - 0.40 \times S N$
$F P_2O_5 = 7.49 \times T - 2.10 \times S P$	$F P_2O_5 = 7.17 \times T - 2.88 \times S P$
$F K_2O = 3.80 \times T - 0.10 \times S K$	$F K_2O = 3.02 T - 0.10 \times S K$
Where, FN = Fertilizer N required/ha; T = Target yield in q/ha; Soil N = Value of Soil N kg/ha F P <sub>2</sub> O <sub>5</sub> = Fertilizer P required/ha; T = Target yield in q/ha; Soil P = Value of soil P kg/ha F K <sub>2</sub> O = Fertilizer K required/ha; T = Target yield in q/ha; Soil K = Value of soil K kg/ha	

#### NOTE

- The soil test values of Narkhoda farm show a high status of available P and K (Annexure I).
- After fitting STCR equation for the target yield (Annexure II), the plots requiring <15kg P<sub>2</sub>O<sub>5</sub>/ha, a uniform dose of 20kg P<sub>2</sub>O<sub>5</sub>/ha is suggested as maintainer dose for providing priming effect for PSB (Annexure III). **Suggested to follow Annexure III.**
- A uniform dose PSB @ 1 kg /ac is suggested to be used as furrow or spot application along with seed at sowing. PSB can also be used as seed dressing.
- Soil K was high in general and a uniform maintainer dose of 20kg K<sub>2</sub>O/ha is suggested.
- Though Sulphur status is not currently estimated, based on earlier reports of wide spread S deficiency in the region, it is desirable to apply S @ 30kg/ha for increasing yield and oil content. Elemental S (GROMOR 90% S) is available in the farm section.
- Along with soil test based balanced nutrient management, clean cultivation, split application of N, applying N in moist soil and covering with soil, spot application of P are better practices for achieving higher nutrient use efficiency.
- Since soils are deficient in boron, soil based or foliar application may be followed for B loving crops**
